

FAYETTEVILLE UTILITIES
JUNE 2, 2025

DRINKING WATER CONSUMER CONFIDENCE REPORT FOR 2024

License to Operate (LTO) Status Information

In 2024 we had an unconditional license to operate our water system.

How do I participate in decisions concerning my drinking water?

Public participation and comments are encouraged, no public meetings are held, but if you would like to participate or comment please contact:

Village of Fayetteville Utilities
Andy Huber
81 West Pike Street
Fayetteville, OHIO 45118
Phone: 513 875 3535 EXT 3
www.villageoffayetteville.org

The Village of Fayetteville PWS #0800411 has furnished this report to provide information to you, the consumer on the quality of our drinking water. The Village of Fayetteville receives all its water from Western Water Company of Morrow, with its plant at Little Miami Aquifer, Warren County. Western Water Company also uses water from The City of Cincinnati Water Works.

Attached are copies of Western Water's report on the source of contamination to drinking water. Information on contaminants and the EPA Hotline for safe drinking water (800-426-4791)

In addition to these reports The Village of Fayetteville takes daily chlorine samples, monthly bacteria sample, and yearly Lead and Copper, TTHM, and HAA5 samples collected by a level 1 Certified Supervisor and send to MASI Lab for testing.

Copies of all these reports are available by calling Fayetteville Utilities @ 513-875-3535 EXT 3.

Village of Fayetteville Source Water Assessment Report is for review @
2024 SWR.pdf(Fayettevilleoh.us)

Western Water's Source Water Assessment Report is available for review at the following
[URL:http://western-h2o.com/wp-content/uploads/2024/06/wwc-water-quality-report-2024.pdf](http://western-h2o.com/wp-content/uploads/2024/06/wwc-water-quality-report-2024.pdf)

Lead Verification: September 9th 2024, Action level of 5.0 ug/L
LC201-LC205 range between ND (<0.6 ug/L)- 0.9ug/L

Copper Verification: September 9th 2024
LC201-LC205 range between 14 ug/L-98ug/L

Service Line Database available upon request. This Database is being updated weekly to be compliant with EPA in a timely manner.

**WESTERN WATER COMPANY
2024 WATER QUALITY REPORT**

IS MY DRINKING WATER SAFE?

Water quality is the first priority at Western Water Company. Constant testing by the dedicated staff of certified operators and laboratory personnel ensure the highest standards for drinking water quality are being met at all times. The test results for 2024 show Western Water Company's water to be of the highest quality. If you have any questions about water quality, please contact Jim Swearingen at the Water Treatment Plant, weekdays at (513)722-1682 between 8:30 A.M. and 5:00 P.M.

WHAT IS THE SOURCE OF MY WATER?

Western Water Company's water comes from an aquifer along the Little Miami River in Warren County. Western Water also purchases water from other water systems and then distributes the various supplies to their customers.

	Percent	Source
Western Water Company	51%	Little Miami River Aquifer Warren County
Cincinnati Water Works	49%	Ohio River, and Great Miami Aquifer

WHY ARE THERE CONTAMINANTS IN MY WATER?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at (800)426-4791.

WHAT ARE SOURCES OF CONTAMINATION TO DRINKING WATER?

The sources of drinking water both tap and bottled water includes rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surfaces of the land or through the ground, it dissolves naturally occurring minerals and in some cases radioactive materials. The water can also pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include: (A) Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife; (B) Inorganic contaminants, such as salts and metals which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; (C) Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm runoff and residential uses; (D) Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff and septic systems; (E) Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations, which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

SUSCEPTIBILITY ANALYSIS

One source of treated drinking water for Western Water Company is the Greater Cincinnati Water Works. Cincinnati has two sources of raw water, one being the Ohio River and the other is the Great Miami Buried Valley Aquifer.

As with all raw water sources, water travels over the surface of the land or through the ground. It dissolves naturally occurring minerals and can pick up substances resulting from the presence of animal or human activity. As with all surface waters the Ohio EPA has classified the Ohio River as highly susceptible to potential contamination. The Ohio EPA has also classified their portion of the Great Miami Buried Valley Aquifer as highly susceptible to contamination due to the lack of an overlying protective clay layer, the presence of low levels of nitrates and the presence of nearby potential contamination sources.

DO I NEED TO TAKE SPECIAL PRECAUTIONS?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno compromised persons such as persons with cancer undergoing chemo therapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at (800)426-4791.

IS OUR WATER SYSTEM MEETING OTHER RULES THAT GOVERN OUR OPERATIONS?

In 2021, our PWS was sampled as part of the State of Ohio's Drinking Water Per- and Polyfluoroalkyl Substances (PFAS) Sampling Initiative. Results from this sampling indicated PFAS were detected in our drinking water below the action level established by Ohio EPA. Follow up monitoring is being conducted. For more information about PFAS, and to view our latest results, please visit pfas.ohio.gov.

In 2024 Western Water Company had an unconditional license to operate our water system.

TURBIDITY

Western Water Company purchases water from other water systems as explained in the source water section. We are required to report on the turbidity as an indication of the effectiveness of their filtration system. Turbidity is a measure of the cloudiness of water. The limit set by the EPA is 0.3 NTU in 95% of the samples analyzed each month, and shall not exceed 1 NTU at any time. As reported in GCWW's Data sheet provided with this CCR GCWW's highest recorded turbidity result for 2024 was .17 NTU at the Miller Water Plant and the lowest monthly percentage of samples meeting the turbidity limits was 100%.

HOW CAN I GET INVOLVED?

Our Water Officials will meet to answer questions each month at the Treatment Plant. Please feel free to participate. Call Jim Swearingen for dates and times at (513)722-1682.

LEAD CAN CAUSE SERIOUS HEALTH PROBLEMS

"If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Western Water Company is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for thirty seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. A list of laboratories certified in the State of Ohio to test for lead may be found at <http://www.epa.state.oh.us/ddagw> or by calling 614-644-2752. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 800-426-4719 or at <http://www.epa.gov/safewater/lead>".

Our distribution system has no lead, galvanized requiring replacement, or lead status unknown service lines. To determine this, we used the following sources: historic records, visual inspections or other documentations that indicate the service line materials. If you would like any additional information, please call the office at (513)722-1682

"THIS INSTITUTION IS AN EQUAL OPPORTUNITY PROVIDER"

WESTERN WATER CO.		2024 WATER QUALITY DATA SHEET					
CONTAMINANTS	YEAR SAMPLE	LEVEL DETECTED	MCL	MCLG	RANGE OF DETECTION	VIOLATION	SOURCE OF CONTAMINANTS
INORGANIC (REGULATED) CONTAMINANTS							
FLUORIDE	2024	1.05 mg/l	4.0 mg/L	4.0 mg/L	0.82-1.27 mg/l	NONE	EROSION OF NATURAL DEPOSITS, WATER ADDITIVE WHICH PROMOTES STRONG TEETH, DISCHARGE FROM FERTILIZER AND ALUMINUM FACTORIES
NITRATES	2020	0.93 mg/l	10.0 mg/L	10.0 mg/L	n/a	NONE	RUNOFF FROM FERTILIZER USE; LEACHING FROM SEPTIC TANKS, SEWAGE; EROSION OF NATURAL DEPOSITS

1. The first group of authors (see Table 1) has been concerned with the question of the role of the state in the development of the economy. The first group of authors (see Table 1) has been concerned with the question of the role of the state in the development of the economy. The first group of authors (see Table 1) has been concerned with the question of the role of the state in the development of the economy.

Substance		Unit	MCL*	Miles Water			Bullion Water			Typical Source of Contaminant
			MRL*	Average Level Database	Range of Detection	Year Sampled	Average Level Database	Range of Detection	Year Sampled	
Pentachloroacetic acid (PCAA)	ppt	4.0	2.0	nd	na	na	2024	na	2024	Highly regulated, highly volatile substance (PFAS compound), an invertebrate toxicant that have been found in consumer products since the 1940s, usually in the manufacture of non-stick coating, clothing, carpet, and food wrap/paper. Research into the fact that PFAS compounds may cause to human health is ongoing. GDWW meet all current EPA regulations. EPA established regulatory standards (MCL) for the group of compounds that include PCAA. The standards do not have a strict limit for several years, but GDWW is working with the EPA to meet the standards. EPA is also working on PFAS rulemaking modifications to minimize PFAS levels in our drinking water. Please see GDWW's website for more information - https://www.ciwinchib.ca.gov/water/quality-and-health/make/healthy-your-health/plan

¹Detected concentrations from this plant site.

Cryptosporidium has limited forage bioavailability in treated waters and has never developed R. GQWV has limited forage bioavailability that, when ingested, can result in diarrhea, fever, and other gastrointestinal symptoms. Cryptosporidium is a protozoan microorganism that, when ingested, can result in diarrhea, fever, and other gastrointestinal symptoms. The GQWV also tested for Cryptosporidium in the Ohio River surface water and it was collected in 1 of 4 samples during 2024. The organism is found in surface waters and comes from animals and human wastes which enter the watershed. Cryptosporidium is eliminated by an effective combination of treatment including sedimentation, filtration, and disinfection.

Turbidity: We are required to report on the turbidity as an indication of fish effectiveness of our filtration system. Turbidity is a measure of the cloudiness of water. The turbidity limit set by the EPA is 0.5 NTU in 95% of the samples analyzed each month, and shall not exceed 1 NTU at any time. As reported in the table above, GCNFW's highest recorded turbidty result for 2024 was 0.17 NTU (Jaller Water) and the lowest monthly percentage of above turbidity results was 100%.

The Miller Treatment Plant uses the Ohio River as its source water. As with all surface waters, the Ohio EPA has classified the Ohio River as highly susceptible to contamination. The Ohio EPA has also classified the portion of the Great Miami River Valley Aquifer that supplies water to the well fields for the Bolton Treatment Plant as highly susceptible to contamination. It does not have an overlying protective clay layer; the ground water has two pools of nitrate, and there are potential sources of contamination nearby.

Definitions
Minimum Reporting Level or MRL: the level of a contaminant that can reliably be detected using the specified analytical method.
Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as is feasible using the best available treatment technology. MCLs for PFASs compounds will be effective in 2026.

Action Level or AL: The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system shall follow.

Treatment technique or TT: A method for treating water to achieve acceptable levels of the contaminants in lieu of establishing a maximum contaminant level.

Public Water System (PWS): A community water supply system that serves at least 15 connections or regularly serves at least 15 people. The lowest level that could be regulated under SDWA is the public water system. The lowest level that could be regulated under SDWA is the public water system and depends on the number of connections and the population served.

2024 CCR Data for GCWW Wholesale Customers

Regulated Contaminants ¹ : Contaminants subject to a Maximum Contaminant Level (MCL), Action Level (AL) or Treatment Technique (TT)

Per- and Polyfluoroalkyl (PFAS) Substances (also known as Forever Chemicals)

For the fifth round of the Unregulated Contaminant Monitoring Rule (UCMRS), U.S. EPA issued a list of unregulated contaminants that may be present in drinking water but are not yet subject to U.S. EPA drinking water standards. In 2024, Greater Cincinnati Water Works finished sampling and analysis of Miller Water for the UCMRS. PFAS compounds were not detected in Miller water in the final round of monitoring. In addition to UCMRS results, the contaminants listed below were analyzed during routine monitoring conducted by GCWW. Additional contaminants were monitored and not detected. If you would like additional information on the results of UCMRS or routine PFAS monitoring, please call 513.591.7700.

Substance	Unit	MCL ⁶	MRL ⁷	Miller Water				Bolton Water				Typical Source of Contamination
				Average Level Detected	Range of Detection	Violation	Year Sampled	Average Level Detected	Range of Detection	Violation	Year Sampled	
Perfluorooctanoic acid (PFOA)	ppt	4.0	2.0	nd	na	na	2024	3.9	2.3 - 5.0	na	2024	Perfluoroalkyl and polyfluoroalkyl substances (PFAS compounds) are man-made chemicals that have been used in consumer products since the 1940s, usually in the manufacture of non-stick coatings, clothing, carpet, and food wrappers. Research into the harm that PFAS compounds may cause to human health is ongoing. GCWW meets all current EPA regulations. EPA established regulatory standards (MCL) for the group of PFAS compounds shown in this part of the table. The standards do not take effect for several years, but GCWW is working with the Ohio EPA to investigate source water quality and operational or treatment modifications to minimize PFAS levels in the drinking water. Please see GCWW's website for more information - https://www.cincinnati-oh.gov/water/water-quality-and-treatment/water-your-health/ptas/
Perfluorooctanesulfonic acid (PFOS)	ppt	4.0	2.0	nd	na	na	2024	4.2	2.8 - 5.4	na	2024

Perfluorobutanoic acid (PFBA)	ppt	na	5	nd	na	na	2024	na	na	na	2024	

¹Detected contaminants from the plant tap.

²GCWW collects one sample per year.

³The value reported under "Highest Compliance Level Detected" for Total Organic Carbon (TOC) is the lowest ratio between percentage of TOC actually removed to the percentage of TOC required to be removed. A value of greater than one (1) indicates that the water system is in compliance with TOC removal requirements. A value of less than one (1) indicates a violation of the TOC removal requirements.

Results of GCWW Voluntary Monitoring for *Cryptosporidium*:

GCWW has tested for *Cryptosporidium* (Crypto) in treated waters and has never detected it. Crypto is a microscopic microorganism that, when ingested, can result in diarrhea, fever and other gastrointestinal symptoms. GCWW also tested for Crypto in the Ohio River surface water and it was detected in 1 of 4 samples during 2024. The organism is found in surface waters and comes from animal and human wastes which enter the watershed. Crypto is eliminated by an effective combination of treatment including sedimentation, filtration, and disinfection.

Sodium: GCWW has tested for sodium in treated water as it leaves the treatment plants and has found 28 mg (milligrams) per liter in the Miller water and 32 mg per liter in the Bolton water. There are approximately 4 cups in a liter.

Turbidity: We are required to report on the turbidity as an indication of the effectiveness of our filtration system. Turbidity is a measure of the cloudiness of water. The turbidity limit set by the EPA is 0.3 NTU in 95% of the samples analyzed each month, and shall not exceed 1 NTU at any time. As reported in the table above, GCWW's highest recorded turbidity result for 2024 was 0.17 NTU (Miller Water) and the lowest monthly percentage of samples meeting the turbidity limits was 100%.

GCWW has a current unconditional license to operate our water system. GCWW was in compliance with all state primary drinking water rules during 2024.

The Miller Treatment Plant uses the Ohio River as its source water. As with all surface waters, the Ohio EPA has classified the Ohio River as highly susceptible to contamination. The Ohio EPA has also classified the portion of the Great Miami Buried Valley Aquifer that supplies water to the well fields for the Bolton Treatment Plant as highly susceptible to contamination. It does not have an overlying protective clay layer, the ground water has low levels of nitrate, and there are potential sources of contamination nearby.

Abbreviations

ppt: parts per trillion or nanograms per liter
ppb: parts per billion or micrograms per liter
ppm: parts per million or milligrams per liter
na: not applicable
NTU: Nephelometric Turbidity Unit, used to measure clarity in drinking water
nd: not detectable at testing limits
nr: not regulated

Definitions

Minimum Reporting Level or MRL: The level of a contaminant that can reliably be detected using the specified analytical method.
Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. MCLs for PFAS compounds will be effective in 2029.
Action Level or AL: The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements which a water system shall follow.
Treatment Technique or TT: A method for treating water to achieve acceptable levels of the contaminants in lieu of establishing a maximum contaminant level.
The < symbol: A symbol which means less than. A result of <5 means that the lowest level that could be detected was 5 and the contaminant in that sample was not detected.

Subject: Fayetteville Village (OH0800411) - CCR Information

Good Morning,

Ohio EPA is working through old violation data and noticed that your public water system has a few outstanding violations that have not yet been resolved.

As we approach the July 1, 2025 due date for this system's 2024 Consumer Confidence Report (CCR) and to help resolve violations that remain outstanding, Ohio EPA is providing drafted language, which if included in your report, will resolve the specific violations listed. Because you are already required to issue a 2024 CCR, this is a very efficient/cost-effective way to resolve these public notice/CCR violations and **is highly recommended by Ohio EPA.**

If you have any questions, please submit those to CCR@epa.ohio.gov.

Sincerely,
Hayley Zimmerman

CCR Violations:

- **2014:** In our 2014 CCR, we did not include the table of detected contaminants for our water system and instead only provided information from our wholesaler. The license to operate status was also not included.
- **2016:** In our 2016 CCR, we did not include the table of detected contaminants for our water system and instead only provided information from our wholesaler. We also did not include the license to operate status and public participation information.
- **2017:** In our 2017 CCR, we did not include the table of detected contaminants for our water system and instead only provided information from our wholesaler.
- **2018:** We failed to generate and/or deliver an annual CCR report for 2018. If you would like information that would have been covered for the 2018 calendar year, please contact us.
- **2019:** In our 2019 CCR, we did not include the table of detected contaminants for our water system and instead only provided information from our wholesaler. We also failed to include portions of the required source water information, susceptibility rating, and mandatory language for lead education.
- **2021:** In our 2021 CCR, the link provided for the CCR was not direct, and we did not include the required source water information, definitions of terms, our table of detected contaminants (only provided wholesaler data), and other mandatory language.
- **2022:** In our 2022 CCR, we did not include the table of detected contaminants for our water system and instead only provided information from our wholesaler. We also failed to provide information about the March 2022 total coliform monitoring violation.
- **2023:** In 2023, we did not include the table of detected contaminants for our water system and instead only provided information from our wholesaler.

For more information on any of the above information, please contact us.

2022 Public Notice for Monitoring Violation: We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During **March 2022, we "did not monitor or test" or "did not complete all monitoring or testing" for total coliform bacteria**, and therefore, cannot be sure of the quality of your drinking water during that time. There is nothing you need to do at this time. You do not need to boil your water or take other corrective actions. **What should I do?** This notice is to inform you that Fayetteville Village did not monitor and report results for the presence of total coliform bacteria in the public drinking water system during the March 2022 time period, as required by the Ohio Environmental Protection Agency. **What is being done?** Upon being notified of this violation, the water supply was required to have the drinking water analyzed for the above mentioned parameters. The water supplier will take steps to ensure that adequate monitoring will be performed in the future. **Please share this information** with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

RE: Certificate of Analysis for Project - Public Drinking Water

The following report contains analytical results for samples submitted on the chain of custody dated September 03, 2024.

I have reviewed the validity of the analytical data generated. All data is reported in accordance to our laboratory QA/QC plan. Any exceptions are noted in the Case Narrative or with qualifiers in the report.

If you have any questions or need additional documentation, please contact our Office.

Sincerely,

A handwritten signature in green ink that reads "Cheryl Rex". The signature is written in a cursive style and is positioned above a horizontal line.
